

Emissions Intelligence Platform (EIP)

Audit-Ready Methane Reporting at Scale

Centralizes methane data, streamlines reconciliation, and delivers verification-ready reporting for OGMP 2.0, MiQ, EUMR, and other standards.

Streamline OGMP reporting with Emissions Intelligence Platform (EIP)

42%¹

of Global Oil Production reports in OGMP

18%²

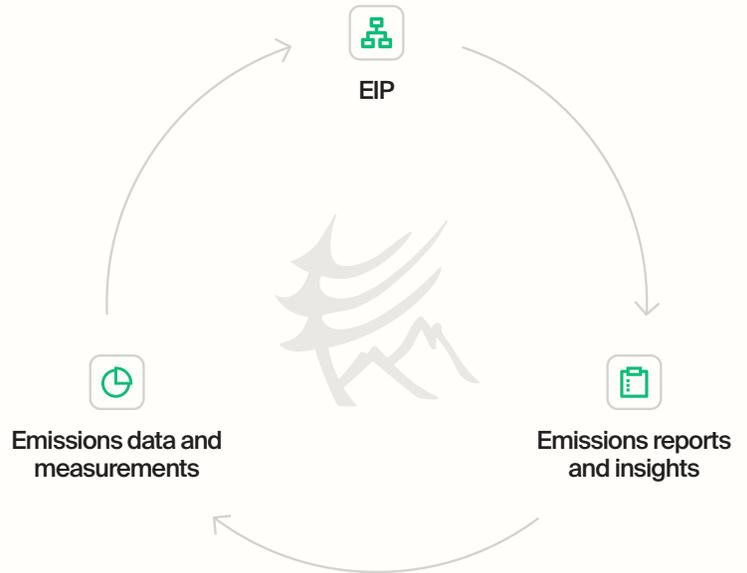

of Assets did not meet the gold standard

Designed by Highwood’s team of methane experts, EIP simplifies OGMP reporting by saving time, centralizing insights, and ensuring compliance—the same way that software transformed tax management.

Built with insights from four of the world’s largest oil and gas producers and shaped by industry feedback, this platform answers the industry’s call for a straightforward solution to a complex challenge. By streamlining reconciliation, EIP reduces timelines from months to minutes and ensures consistent, auditable results.

EIP is your organization’s pathway to precise, measurement-informed inventories in a rapidly evolving methane landscape.

As EUMR and other assurance-driven requirements emerge, EIP helps teams produce traceable, verification-ready evidence – not just a report.

^{1,2}(UNEP) An Eye on Methane 2025: From Measurement to Momentum. Available at <https://www.unep.org/resources/eye-methane-2025-measurement-momentum>

Why choose EIP?

Save time, achieve more

Generate a Level 4 MII from inventory and site data in an afternoon

Complete a Level 5 MII report in just one day

Leverage built in expert guidance

Use step-by-step workflows to master MII reporting quickly and efficiently

Instantly gain expertise for successful OGMP submissions

Avoid reinventing processes or risking non-compliance with UNEP standards

Maximize business resources

Focus your experts on operations, not calculations

EIP calculates materiality, emissions factors, uncertainty, and extrapolations - with easy to support processes for your organization.

Reduce costs

Design cost-effective measurement campaigns with precise data from the start

Identify patterns and deploy optimized equipment to answer methane questions effectively

Eliminate complex spreadsheets

Scalable, consistent processes across business units

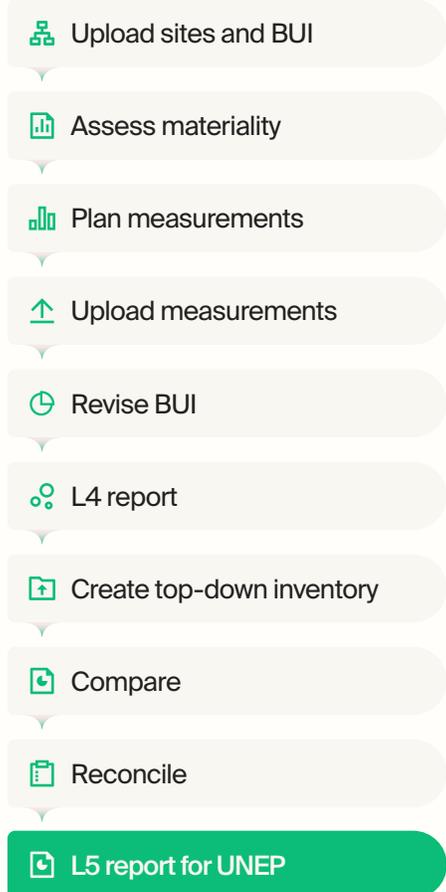

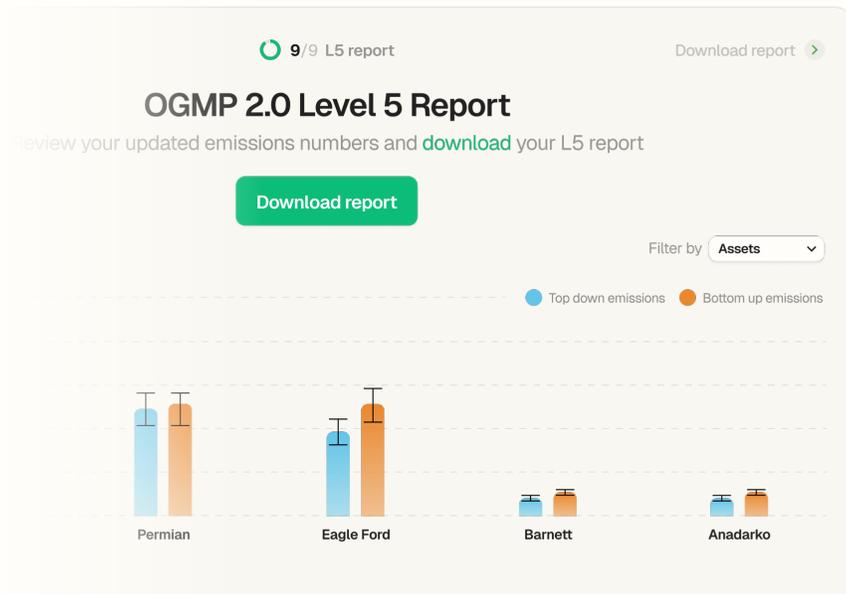

Eliminate manual entry and ensure data integrity in a SOC2-compliant system

Visualize insights effortlessly with ready-made analytics tools

Stay ahead as EIP evolves with industry standards

Inventory reconciliation in minutes

EIP handles the complex OGMP 2.0 Level 4 and Level 5 process with simple workflows for your team.

Technical benefits and features

Sophisticated analysis made simple

- 01 Instantly calculate the minimum sites you should sample based on UNEP guidance, giving you key planning insights to ensure a cost-effective measurement campaign and a Gold Standard OGMP 2.0 L5 submission.
- 02 Calculate measurement-informed emission factors for use in your company-specific bottom-up inventory.
- 03 Generate a top-down inventory with advanced algorithms that automatically address temporal projections, materiality assessments, and below-detection-limit emissions.
- 04 Automatically calculate and visualize measurement uncertainty, leveraging Highwood's expertise to meet UNEP's standards with advanced, user-friendly tools.

Repeatable, auditable and scalable processes

- 01 Understand your source-level measurement progress and know if and how the trend differs from your opening emission factors as data is collected, rather than waiting for the final report.
- 02 Simple processes, sophisticated results: Methane quantification and reporting under OGMP 2.0, MiQ, Veritas Pathways, the EU Methane Regulation (EUMR), and emerging EU and CDPHE regulations.
- 03 All methodologies are fully documented and ready for use in your report.
- 04 Standardized and consistent approaches require less effort and specialized knowledge to audit.
- 05 Deliver actionable, leadership-ready reports, including Methane Inventories and Scorecards.

About Highwood Emissions Management

With a deep focus on innovation, regulatory compliance, and emissions reporting, Highwood helps organizations navigate the complexities of methane emissions management.

Services

Trusted Methane Experts

EIP is backed by Highwood’s specialist consulting team – supporting the methodological decisions that determine credibility, from measurement strategy and reconciliation through to audit-ready documentation and submission packages.

Services are available with or without EIP; when a single source of truth is needed, EIP centralizes data and workflows to keep outputs consistent and traceable.

Results

By combining EIP with Highwood’s expert services, operators can move faster from fragmented methane data to repeatable, verification-ready inventories and reporting –reducing rework and risk while improving confidence in submissions across OGMP 2.0, MiQ, and EUMR.

Common ways to engage Highwood experts

Assessment

- Gap assessments for OGMP 2.0, MiQ, and EUMR to define priorities and a credible roadmap
- Technology roadmap to guide measurement investments and coverage

Implementation

- EIP onboarding, workflow configuration, and team training
- Bottom-Up Inventory (BUI) development to standardize inventory inputs for MIIIs

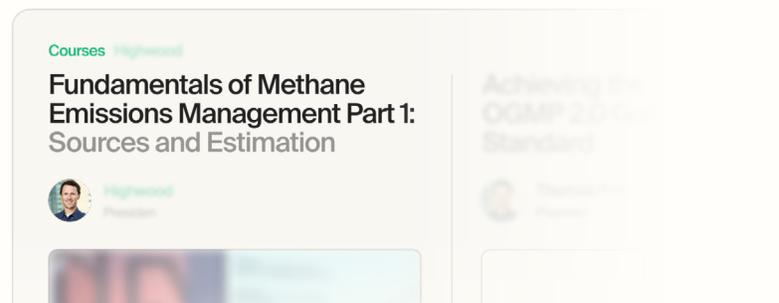

Reporting & Support

- MII strategy and reconciliation support (top-down + bottom-up)
- Submission-ready reporting support for OGMP 2.0, MiQ, and EUMR

Education

Sharing knowledge and thought leadership

We provide customized methane emissions training for oil and gas, covering management, technologies, reconciliation, initiatives, and U.S. and Canadian regulations.
